                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel antisense compound (I) 8-30 nucleobases in length targeted to a start codon or nucleobases 4-3174 of the coding region of human Pl3 kinase pl10beta (II), in which (I) specifically hybridizes with and inhibits the expression of (II). The products of the invention have cytostatic, antiinflammatory and antiinfective activity. (I) is useful for inhibiting the expression of (II) in human cells or tissues. The antisense compound can be utilized for diagnostics, therapeutics, prophylaxis and as research reagents and kits. The antisense compounds may also be useful prophylactically, e.g. to prevent or delay infection, inflammation or tumor formation. The antisense compounds are useful for research and diagnostics, because these compounds hybridize to nucleic acids encoding (II).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        354

Patent No. 5856132
GENERAL INFORMATION:
APPLICANT: Hawkins, Len
APPLICANT: Braselman, Sylvia
TITLE OF INVENTION: PHOSPHATIDYLINOSITOL-3' KINASE
NUMBER OF SEQUENCES: 14
CORRESPONDENCE 14
CORRESPONDENCE ADDRESS:
ADDRESSE: Pennie & Edmonds, LLP
STREET: 1155 Avenue of the Americas
CITY: Naw York
STATE: NY
COUNTRY: USA
ZIPP: 10036-2811
COMPUTER: IBM Compatible
OPERATING SYSTEM: Windows Version 2.0b
SOFTWARE: FastSept for Windows Version 2.0b
CURSTREAT APPLICATION DATA:
APPLICATION NUMBER: US/08/916,917
FILING DATE: 15-AUG-1997
CLASSIFICATION DATA:
